

Land use and climate change: new pressures and new possibilities?

Veronika Meduna (The Conversation)
Professor Tim Benton (UK)
Professor Annette Cowie (AUS)
Dr Fatima Denton (Ethiopia)
Dr Anita Wreford (NZ)

Since humans arrived in Aotearoa New Zealand, we have been modifying the land to suit our purpose. Our current land use patterns reflect the influence of a range of factors including climate, soils, landform, biodiversity, ownership, culture, and economics.

But with climate changing more rapidly due to human-induced global warming, what are the implications for land use, here and around the globe?

Veronika Meduna delves into these issues with a panel of international contributors - their expertise is in global food security, sustainable resource management, renewable energy, sustainable development, and economics relating to climate change.

All Welcome

CHRISTCHURCH
The Piano
Philip Carter Family Concert Hall
7pm Wednesday 28 March

To guarantee your seat(s), please register at royalsociety.org.nz/events
